Section 24(c) Special Local Need Label

SUPPLEMENTAL LABELING FOR SPECIAL LOCAL NEED IN IDAHO

FOR DISTRIBUTION AND USE ONLY WITHIN IDAHO

DISCOVER™

EPA REG. NO 100-907
EPA SLN No. ID-010005

**A single pass liquid postemergence herbicide for control of grass weeds in Spring
and Winter wheat (including Durum)**

Active Ingredient:	
Clodinafop-propargyl (CAS No. 105512-06-9)	22.3%
Other Ingredients:	77.7%
Total:	100.0%

This product contains petroleum distillates, xylene, or xylene-range aromatic solvent.

KEEP OUT OF REACH OF CHILDREN.

WARNING/AVISO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA-approved Discover label.

This label must be in possession of the grower at the time of pesticide application.

Applied postemergence, Discover is rapidly absorbed by weed foliage and translocated to the growing points where it inhibits the acetyl CoA carboxylase (ACCase) enzyme. Susceptible weed species generally stop growing within 48 hours, turn yellow within one to three weeks, and are completely controlled within three to five weeks. Level and rate of control depend on weed species, growing conditions, crop competition, and coverage. Thorough coverage of the plants is essential for consistent control.

Rotational Crop Restrictions

The following crops may be planted at the specified interval following application of Discover.

Crop	Rotational Interval
Wheat (including Durum)	0 days
Lettuce and other leafy vegetables	30 days
Small grains other than wheat (including Durum)	30 days
All other crops	30 days

Wheat (Including Durum)

Discover Herbicide can be used on all types of wheat (including Durum) grown in Idaho. Do not allow spray to drift to adjacent fields seeded to crops other than wheat. Do not treat wheat underseeded to forages.

Notes: To avoid possible illegal residues: (1) Do not graze livestock or feed forage from treated areas for a minimum of 30 days following application; (2) Do not feed hay for 30 days following application; (3) Do not harvest for 60 days following application; and (4) Make only one application per crop season; (5) Do Not make an application to Winter Wheat in the Fall.

Weeds Controlled

Discover Herbicide controls wild oats, volunteer oats, green foxtail, yellow foxtail, giant foxtail, barnyardgrass, canarygrass, Persian dandel, volunteer corn, and annual ryegrass.

Timing of Application

Apply Discover Herbicide to all types of wheat (including Durum) from the 2-leaf stage to pre-boot stage. When tank mixing with a broadleaf herbicide, always refer to the label of the tank mix partner prior to use.

For optimum results, apply Discover Herbicide to actively growing weeds. An early application will maximize crop yields by reducing weed competition. Weeds emerging after application will not be controlled.

TIMING OF APPLICATION TO WEEDS		
Weed	Leaves on Main Stem	Tillers
Wild Oats Volunteer Oats Canarygrass	1 to 6-leaf stage on main stem	Prior to emergence of the 4th tiller
Green Foxtail Yellow Foxtail Giant Foxtail	1 to 5-leaf stage on main stem	For optimum control, apply prior to emergence of the 3rd tiller and while weeds are actively growing.
Persian Dandel Annual Ryegrass Barnyardgrass Volunteer Corn	1 to 5-leaf stage on main stem	For optimum control, apply before tillering and while weeds are actively growing.

Weed control can be reduced or delayed under conditions of stress, such as drought, heat, insufficient fertility, flooding, and prolonged cool temperatures. Grass escapes or re-tillering may occur if application is made during prolonged conditions of stress. Optimum weed control will be obtained if application of Discover Herbicide is delayed until the conditions of stress have ended and weeds are once again actively growing.

Note: Discover Herbicide alone can be used 30 minutes before rainfall.

Precaution: Do not apply to a crop that is stressed by conditions such as frost, low fertility, drought, flooding, disease damage, or insect damage, as crop injury may result. Wheat is more susceptible to injury when exposed to temperatures below 40°F during the period 48 hours before or after Discover Herbicide application.

Use Rates

Apply the recommended rate of Discover Herbicide and DSV Adjuvant, using ground equipment, in a minimum of 5 gals. of water per acre, or apply aerially in a minimum of 3 gals. of water per acre (see Application Procedures section on the EPA-approved Federal label for exceptions).

PRODUCT AND ADJUVANT USE RATES*	
To Control: Wild Oats Volunteer (fame) Oats Barnyardgrass Canarygrass Volunteer Corn Green Foxtail Yellow Foxtail	To Control: Giant Foxtail Persian Darnel Annual Ryegrass (Italian)
Apply: 3.2 oz./A of Discover + 10.2 oz./A of DSV Adjuvant	Apply: 4 oz./A of Discover + 12.8 oz./A of DSV Adjuvant
Note: The content of one Discover case treats 50 Acres.	Note: The content of one Discover case treats 40 Acres.

*See Tables 1 and 2 on the EPA-approved Federal label for Discover use rate in a tank mix with broadleaf weed herbicides.

Note: Always use DSV Adjuvant with Discover Herbicide. When applied at the recommended rates, all the DSV Adjuvant will be used with the Discover Herbicide in each case of product.

Although Discover does not control broadleaf weeds, it can be tank mixed with a wide range of broadleaf herbicides to provide broad spectrum one-pass weed control. See the section entitled **Tank Mixes of Discover Herbicide with Broadleaf Weed Herbicides on the EPA-approved Federal label** attached to the container.
